

The background of the slide is a dark blue technical drawing. It features various geometric shapes, including circles, arcs, and lines, rendered in a light blue and yellow color. The drawing appears to be a schematic or blueprint of a complex mechanical or structural component, possibly related to the Large Synoptic Survey Telescope (LSST).

# DM Middleware Staffing, 2019-10

*Large Synoptic Survey Telescope*

# Jim's Arc

- Algorithms workshop...
- Construction papers...
- Jim says:
  - Wants to be main registry dev until multi-user registry
  - After: needed for structural changes, but others could start to take lead on these
    - Folks like Tim, Nate, Andy S, Michelle G are probably ready
- Examine “Jim needs to get on to other things”

# Continuing resources from other T/CAMs:

Checking in on:

- Tim
- Nate
- Yusra
- Chris Waters
- John Parejko
- Andy S.
- Gabor
- Krzysztof

# Question:

Who is the MW product owner?

- To date, cabal from MWG (Jim, Tim, Michelle G)
- How should this be?

# LSP Concerns (from Jim)

Planning to date has followed on from MWG, very pipelines-centric.

What about LSP needs, things said such as:

- batch for users
- CAOM2 registry views
- caching from-tape datastore
- Expecting production-oriented to “just work” for users probably naive?

Are we capturing these needs? We need to identify people to lead them, sign them up...

# Long-term Stewardship

- Is the SLAC DAX guy the right guy for this job? (rhetorical!)
- Could go several directions:
  - Toward pipelines...
  - Toward ARCH...
  - Toward NCSA...
- Split responsibilities?
- Candidates...
- When / conditions
