# SQuaRE S20 and the cycle that was
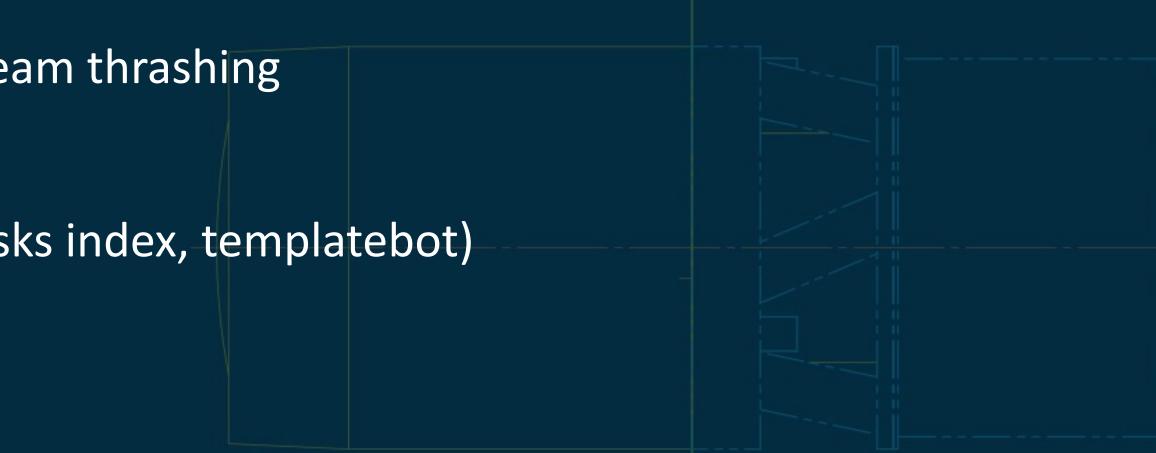

DMLT Oct 2019

2019-10

S19 highlights

- Nublado:
  - Nubaldo-in-a-box (k3s-based deployment) now in Tucson (soon at the Summit?)
  - Stabilisation (pins and recommended tag)
  - A&A integration
  - JupyterLab 1.0
- EFD 🎉 (though a bit of a surprise) live at the Summit and in Tucson
  - Avro (h/t Russel)
  - new connectors / protect system against upstream thrashing
- Jenkins and EFD secrets in vault
- Many doc improvements (script doc template, tasks index, templatebot)
- Iterated on deployment architecture
- "Defects" handling, obs_package improvements
- SQR-032 (QAWG docs), SQR-033 (QAWG squash), SQR-034 (EFD), SQR-035 (GitOps)

frossie@lsst.org

S20 (!!) next up

Planned

- EFD - the LDF end of SQR-034

- The headless/non-interactive/user-batch spectrum: technote brewing for Notebook CI

- Provenance WG

- Finalise and start transitioning services to SQR-035

- Release Roundtable

- Python wrappers for EFD access from nublado & general Chuck et al support

Maybe

- Hire 🤞

- Move SQuaSH to EFD architectural model

Ops

- No serious development impact
