

Data Management All Hands Meeting 2023

William O'Mullane Data Management Project Manager / Associate Director AURA/Rubin Observatory

13th March 2023

- Remember we have a code of conduct for meetings Document-28973 and one for communications Document-24920.
- Shared responsibility for health of the community and thus meeting atmosphere Respect consider a variety of viewpoints and approaches:
 - notbuttinginconstantlywhenotherpeoplearespeakingbecausewedisagree Honesty be prepared for some civil discussion
- To respect every ones time a good meeting should have:
 - An agenda which should be largely adhered to
 - Recorded Minutes with Decisions and Actions (which may be confluence Jira)
- In this online meeting we will have a moderator in each session
 - Use raise hand feature of zoom for questions (as moderator requests) Tim Jenness
 - Questions may be best in DM slack channel with threads (rather than zoom chat)

- 1. DM/DP highlights and plans (m)
- 2. Summit architecture KT (15-20m)
- 3. Lightning talks (15-30m)
- 4. 15:55 Photo on left patio (my left)! And coffee break
- 5. 16:30 Phalanx Frossie (15m)
- 6. Sasquatch Angelo (15m)
- 7. Any other questions
- 8. 17:15 Enjoy La Serena

Data Management
Organization

Management team remains stable.

Lubi (admin) added

Large gap in Square Product ownership.

<u>LDM-294</u> updated but always behind

See <u>RTN-046</u>

Five areas of oversight aligned with core activities

- Data Production
- Data Services
- Data Abstraction
- Data Facilities
- Data Acquisition

Rubin Observatory System Performance department is responsible for ensuring that the LSST as a whole is proceeding with the efficiency and fidelity needed to achieve its science requirements at the end of the 10-year survey

- Bruno Sanchez (AP)
- Kai Koehler (SQuARE)
- Omari Paul (Data Curation)
- Ramya Eranna (Infrastructure)
- Peter Vaucher (Infrastructure)
- Sreevani Jarugula (System Performance and Infrastructure)
- Becky Nevin (System Performance and Infrastructure)

Carlos Barría DevOps IT Chile J Joined June 2022

Along with the IT Chile team, I help prepare and maintain in excellent condition, the servers and clusters that work and process Scientific Data I am proud of my work in automating the provisioning, configurations, updates and services of

the large number of servers that we manage,

whether they are virtual, bare metal or Kubernetes. In my free time I play the guitar, play online video games and enjoy cooking.

Hernán Stockebrand | IT Network Engineer | Ingeriero en Redes Joined March 2021

I work as a Network Engineer, where I design, maintain and continuously make improvements, interconnecting all the observatory systems, from the User Network control systems, to the future traffic of data that will be produced by the 3.2 giganizel camera

Network Automation: Automation of maintenance tasks, configuration and updating of our network infrastructure

Awarded astrophotographer with publications in Astrofotografo, con newspapers, magazines and television intery revistas, entrevist views thanks to my images and knowledge of obgenes y conocimien servational astronomy. I like to automate things; al. Me gusta automa in my home, all lighting, heating, TVs are autotomatizadas todas i mated, which can be controlled by voice. que pueden ser con

Nima Sedaghat Deep-Vision Scientist, Al Lead at LSST AP | Cientifico de Visión Profunda, Principal de lA en LSST AF joined November 2021

I help lead a couple of projects working on development of deep learning/AI-based methods for the LSST Science Pipelines, My current focus is on transient hunting, or more exotically put, supernova hunting

While I was still doing my PhD in Computer Vision a few years ago, I thought of giving my childhood passion (astronomy) a try. I applied computer vision techniques on astronomical data, developed an Al-based algorithm for supernova hunting, and published it under the name TransiNet. Now, a few years later, I have joined the great team of Rubin scientists, and am implementing TransiNet as a key part of the rio de vanguardia. cutting edge observatory.

As a teenager I was obsessed with astronomy, to the extent that I made a 15 cm telescope mirror (by gripding and polishing) in the basement of our house. But I was also interested in hiking and climbing, so much that I fell off a 17 m high cliff at the age of 18. Anyway I recovered and continued studying Electrical Engineering at university-notice anything strange? Now I am working at the cross-section of signal processing, aprendizaie profundo v deep learning, and astronomy, and am grateful for whatever caused this not-so-straight path!

Fred Moolekamp Research Scientist | Investigador Científico Joined August 2016

I'm part of the team that works on the science pipelines algorithms to calibrate and analyze images taken by the Rubin Observatory. Over the 10 year survey each patch of the sky will be revisited ~2000 times, and combining those images allows us to see fainter (and farther) things. This results in images that become increasingly crowded, with galaxies and stars overlapping one another and making it difficult to make measurements on any one object. So my primary job is to work on software to "deblend" those stars and galaxies so that we can attempt to make measurements on them as if they were isolated in the sky.

ogether with Peter Melchior and the assistance of other postdocs and faculty members. I co-developed the "scarlet" software package to deblend stars and galaxies. The package built on the successful deblending algorithm used in the Sloan Digital Sky Survey, exnanded it by working with images taken at different bands tion algorithm. In 2021 this became the primary deblender used in the science pinelines and it will continue to be modified and improved over the next few years.

My main interest is in physics and math education, so I enjoy giving talks, lectures, and developing apps to aid communicating science at all levels. When I'm not thinking about science I'm probably either exercising, trying to enjoy the outdoors with my family (as weather n western NY permits), or starting various art projects that will never actually be finished

-Highlights-Avudo a liderar un par de provectos que trat rollo de métodos basados en aprendizaie pr los Dato ductos Científicos de LSST. Mi enfoc búsqueda de transitorias, o dicho de manera más exótica. la búsqueda de supernovas.

Cuando estaba haciendo mi doctorado en Computer Vision hace unos años, pensé en darle una oportunidad a mi pasión de la infancia (la astronomía). Apliqué técnicas de computer vision en datos astronómicos, desarrollé un algoritmo

miembros de la tacuitad, desarrollamos en conjunto el paquete de software "escarlata" para separar estrellas y galaxias. El paquete se basó en el exitoso algoritmo de eliminación de mezclas utilizado en Sloan Digital Sky Survey, el cual fue ampliado al trabajar con imárenes tomadas en diferentes bandas (longitudes de onda) y se implementó un algoritmo de optimización meiorado. En 2021, este se convirtió en el principal separador de señales que se superponen utilizado en los datoductos científicos y sequirá siendo modificado y mejorado en los próximos años

Mi principal interés es la educación en la física y matemáticas por lo que disfruto dando charlas, conferencias y desarrollando aplicaciones para ayudar a comunicar la ciencia a todo nivel. Cuando no estov pensando en la ciencia, probablemente estov haciendo eiercicio, tratando de disfrutar del aire libre con mi familia (siempre que el clima en el oeste de Nueva York lo permi ta) o comenzando varios provectos de arte que en realidad nunca

Research Database Technical Lead | Jefe Técnico de la Base de Datos de Investigación Joined December 2014

I lead a small development team at SLAC working on design and implementation of high-performance database systems that are necessary to keep up with Rubin's ambitious scale and pace. These systems include Qserv (a scalable SQL database for released survey catalogs) and the Alert Production Database (time-critical online support for Rubin's alert production pipelines). Lately Lhave also been beloing out with the planning and coordination of Rubin's US Data Facility at SLAC

During my tenure at SLAC, we've seen the Oserv system

duction system. Recently, we substantially re-factored
