Roadmap to Deprecation of Gen2 Butler
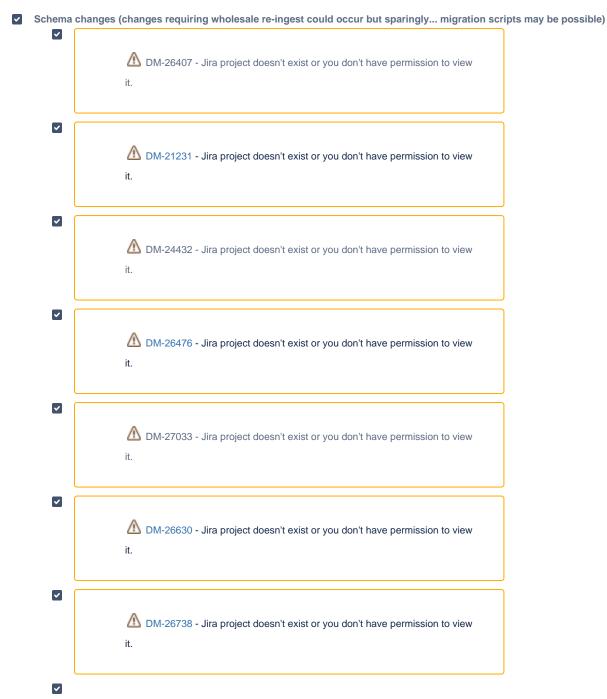

Checklist: Gen3 ready for general use within DM and encouraged for advanced users (DM-DAX-12 Feature Parity)
List of potential

We are aiming for November 1st.

Planned Work

Tickets indicate planned work. Checkboxes without tickets are (hopefully) all statements about functionality that is available.

- ☑ **Schema changes (changes requiring wholesale re-ingest could occur but sparingly... migration scripts may be possible)**

☑ **list of needed Gen3 Butler functions/command-line tools**

☑ ⚠ **DM-26684 - Jira project doesn't exist or you don't have permission to view it.** **: simple command-line tool (prune-collection), high priority**

☑ ⚠ **DM-26685 - Jira project doesn't exist or you don't have permission to view it.** **: more complex command-line tool (query-datasets), unblocks many others, only slightly lower priority**

☑

⚠️ **DM-26690 - Jira project doesn't exist or you don't have permission to view it.** : more complex command-line tool (query-data-ids), may not unblock as much

☑ ⚠️ **DM-26856 - Jira project doesn't exist or you don't have permission to view it.** : butler method and command-line tool (prune/unregister/delete/remove-dataset-type)

☑ ⚠️ DM-26874 - Jira project doesn't exist or you don't have permission to view it. : rename pipetask2 to pipetask, remove old pipetask

☑ **BPS Features needed for developers (single/multi-node)**

☑ ⚠️ DM-26458 - Jira project doesn't exist or you don't have permission to view it.

☑ ⚠️ DM-27039 - Jira project doesn't exist or you don't have permission to view it.

☑ ⚠️ DM-26734 - Jira project doesn't exist or you don't have permission to view it.

☑ ⚠️ DM-26408 - Jira project doesn't exist or you don't have permission to view it. (Initial unit tests are not explicitly a requirement for Gen2 deprecation)

☑ ⚠️ DM-26385 - Jira project doesn't exist or you don't have permission to view it. (Again not explicitly a requirement for Gen2 deprecation, but should be a small change that will be less confusing for users and remove code.)

Open Questions

- Raw Ingest works (caveat: ⚠ DM-21706 - Jira project doesn't exist or you don't have permission to view it.) but:
  - still an open question as when to run define-visits.
  - Handling of photo diodes for BOT will need special ingest script and associated formatter infrastructure.
- We are still dependent on the Filter singleton being removed if we wish to combine multiple instruments in a repository.

Acceptance Tests

We regularly run small test pipeline with Postgres. ci_hsc_gen3 runs entirely with gen3 on a single node with multiprocessing and sqlite/local file. Google POC has demonstrated we can run an RC2 tract with condor using S3+Postgres (DMTN-157). These tests all assume shared everything where multiple users are using a shared datastore and a shared postgres database. These tests can not be complete given the current status of cp_pipe with Gen3 and the lack of jointcal.

☐ **Run a pipeline on a single node using pipetask**
    ☐ **Access data products of that run from a notebook**

☐ Run a 3 tract RC2 in under a week on NCSA Condor system using BPS

☐ **cp_pipe equivalent available (recipe + example)**

☐ **run RC2-like processing (not necessarily full-scale)** (https://github.com/lsst-dm/gen2-hsc-rc2 & https://paper.dropbox.com/doc/Using-HSC-RC2-to-test-algorithms-on-tract-scale-LIXxHweXU2ZOnuJB6cMZ0)

☐ **run DC2-like processing (not necessarily full-scale)**

☐ **can run CPP - corresponding to appropriate above scales**

☐ Ingest all the raw datasets that are currently hosted at NCSA for supported instruments.
