

8th August 2014

Attendees : ajc, jim, richard, peter, steve, simon, Lynne, Srini, Debbie, George, Kem, Kirk

Peter: New release yesterday. Installation issues are being worked through (most resolved). Common issues are

- Xcode terms of use
- /Developer directories (from updated Xcode)
- Anaconda at the root is an issue (fixed)
- astrometry.net version had issues (old version)

Not currently clear who has installed the code.

Bugs: healpy bug in version 1.8

Steve will ping workshop leads to make sure they have installed MAF

Will request that people will rerun "eups disturb install maf" at the beginning of the session to update the codes (should be just maf, catutils, photutils)
