

# LSST Database Hangout 2014-09-03

## Date

03 Sep 2014

## Attendees

- [Jacek Becla](#)
- [Fabrice Jammes](#)
- [Unknown User \(danielw\)](#)
- [Serge Monkewitz](#)
- [Andy Salnikov](#)

## Goals

- Get together, resolve all bottlenecks, make progress faster, plan, exchange ideas

## Discussion items

building release on dist server

- need Mario's help (permissions for lsstsw, or hipchat bot command)

scisql

- Serge started moving scisql from bazaar to github
- issues and history not migrated yet
- <https://github.com/smonkewitz/scisql>
- make eups package out of it, instead of downloading and configuring?
- related ticket <https://jira.lsstcorp.org/browse/DM-750>
- resolved during hangout by Daniel

no-internet download (DM-602)

- we now have just a distribution server
- want to clone and put somewhere on disk
- rsync requires lsst account
- wget and curl - hard to download all files in directory
- don't want to maintain static tarballs for every change, every version
- can't easily run custom script to eg generate tarball on the fly
- need help from Mario / need new functionality
- current version (static tarball) ok in the short term
- update instructions: use standard install procedure (in addition to qserv-install.sh script) after installing local distribution server.

DM-666

- we want sconUtils without dependency on eups
- opened subtask (DM-1164)

DM-1036

- "design and exploratory prototype"

DM-1152

- decisions captured in jira

## Action items
