

Data Access Meeting 2015-05-11

Date

11 May 2015

Attendees

- IPAC: [Tatiana Goldina](#), [Trey Roby](#), [Unknown User \(xiuqin\)](#), [Loi Ly](#)
- SLAC: [Brian Van Klaveren](#), [John Gates](#), [Andy Salnikov](#), [Jacek Becla](#), [Kian-Tat Lim](#)
- Observers: Ashley

Discussion items

Error handling

- want to define common exceptions / error codes (most likely a small number, <20)
- start with top level
- for db related, can model on <https://www.python.org/dev/peps/pep-0249/>
 - Warning, Error, InterfaceError, DatabaseError, DataError, OperationalError, IntegrityError, InternalError, ProgrammingError, NotSupportedError
- worth looking at public commonly used services (e.g github) and use that as a template
- Brian will propose / document in a new confluence page

webcommon

- common repo for web related things, eg template rendering
- webcomon is not a good name, rename
- it really is "data access services common"
- rename to webServCommon (unless we come up with better name)
- K-T needs to think about names spaces for modules
