

Data Access Meeting 2015-08-10

Date

10 Aug 2015

Attendees

- [Gregory Dubois-Felsmann](#), [Unknown User \(xiuqin\)](#), [Tatiana Goldina](#), [Brian Van Klaveren](#), [Andy Salnikov](#), [Jacek Becla](#)

Discussion items

json

- need column names in json, it is not supported right now
- ipac team want to see sample data. (Working webserv made available shortly after the meeting, so it is done)

csv

- what dialect?
- it has no nested structures, hard to pass errors. Probably errors should still go via json
- to pass errors, no nested structures

ipac table

- fixed field format, have to predict field size, can't stream unless field sizes are known, so problems with variable size.
- slac team will look into that

conclusions

- easier to just convert from json to cvs on ipac side, start with json
- add support for column names (Brian will do)
- use DataAcc hipchat room for any issues
- sync on Wed at 10am (hangout)
- send a list of port numbers we need open
