

Meeting Notes 2015-08-31

Discussed in Data Access meeting.

qserv, incoming queries to mysql, how to authn/z these queries?

- mysql pluggable auth structure
- defer auth to pam
- auth inside qserv
 - standard mysql grant structure
- are db permissions going to be different for different users? i.e. "level 3"

SUI, everyone has a login

- once people login, APIs for level 1 and 2 mean one account for access, but...
- level 3 requires credentials to be passed on

TODO: one confluence page to gather requirements: mandatory requirements and desired features
doodle poll for next meeting, bi-weekly
