AP Pipeline Meeting, 2018-03-23

BlueJeans: https://bluejeans.com/426716450

- Status of work in progress:
  - DECam crosstalk correction.
    - Results from review; timeline to get them resolved.
    - Review was helpful. Meredith and Colin have been working on this.
    - Now works when run alone, but not through processCcd.
    - We should be able to fix that this afternoon.
  - L1DB.
    - Did Chris get this up & running?
  - Matcher technote.
  - Status of DiffIm:
    -
      > ⚠ DM-13831 - Jira project doesn't exist or you don't have permission to view it.
    - Talk about this in terms of sprint planning next month.
  - AP pipe refactoring.
    - Update of ap_pipe to CmdLineTask is now done; there was much rejoicing.
    - There are changes to pipe_base which would be useful to support multiple repositories, but John Swinbank not keen to move forward on that until we actually have a requirement for it.
- Coming next:
  - QA plots. Nothing to discuss.
  - Making ingestion into a task.
  - DM-13875 says we can use SQLite for L1DB — hooray!
- Unknown User (emorganson) struggling with a doc bug in the tutorial — it no longer matches current ap_pipe. Probably worth holding off until docs can be updated.
